Grisnir

Install Grisnir VPN on macOS

Quick setup guide

These steps show how to install Grisnir VPN, approve the required macOS network extension, and get connected.

1 Open Grisnir VPN and sign in

Open the app from Applications, enter your Grisnir account email and password, and click **Log in**.

2 Click Connect

After signing in, choose your server if needed, then click **Connect.**

3 Approve the network extension

When macOS shows the network extension prompt, click **Open System Settings**.

4 If macOS blocks the extension

If you see a System Extension Blocked message, open System Settings and continue with the approval steps on the next page.

ⓘ **Note:** macOS may ask for administrator approval during setup.

Grisnir

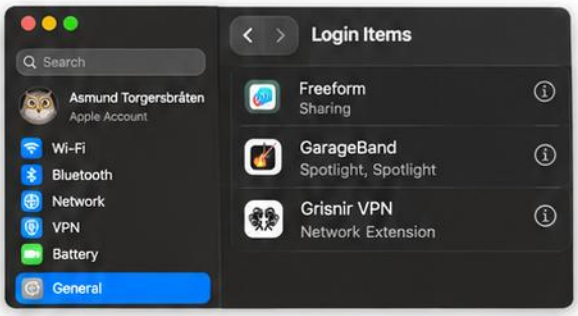

Install Grisnir VPN on macOS

Quick setup guide

Finish the approval in System Settings, then return to Grisnir and connect.

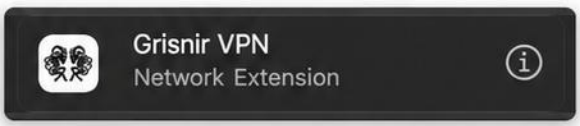

5 Open Login Items & Extensions

In System Settings, go to **General > Login Items & Extensions**.

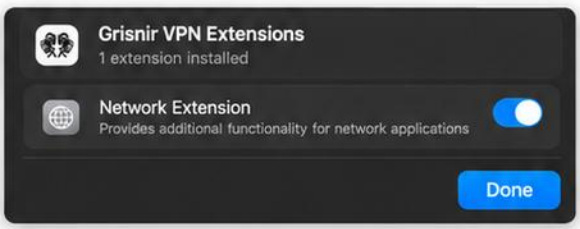

6 Open Grisnir VPN Extensions

Find Grisnir VPN in the list and click the info button to view its installed extensions.

7 Turn on Network Extension

In Grisnir VPN Extensions, turn on **Network Extension**, then click **Done**.

8 Return to Grisnir and connect again

Go back to Grisnir, click **Connect** again, and allow the VPN configuration if macOS asks.

9 Verify you are protected

When the VPN is active, Grisnir shows Protected, the latest WireGuard handshake, and traffic counters.

Note: If macOS asks for an administrator password, enter it to finish approval.
